The program covers:

- Python basics like control structures,
- Looping statements
- Dictionaries,
- Lists, tuples etc.
- Object oriented programming in Python.

The outcome of the program:

- Python is a dynamic, interpreted (bytecode-compiled) language.
- There are no type declarations of variables, parameters, functions, or methods in source code.
- This makes the code short and flexible, and you lose the compile-time type checking of the source code.
