5. Award of Grades, SGPA, CGPA

Credits, Grade Letter, Grade Points and Credit Points

Credit means the unit by which the course work is measured. In these Regulations one credit means one hour of teaching work or two hours of practical work per week.

Grade Letter is an index to indicate the performance of a student in a particular course (Paper). It is the transformation of actual marks secured by a student in a course/paper. It is indicated by a Grade letter O, A, B, C, D, E, F. There is a range of marks for each Grade Letter. In case the student is absent for any exam, Ab is indicated in the memo in place of the Grade Letter.

Grade Point is weightage allotted to each grade letter depending on the marks awarded in a course/paper

Award of Grades

Range of % of Marks	Grade Letter	Grade Point
≥ 85 to 100	O	10
≥ 70 to < 85	A	9
≥ 60 to < 70	B	8
≥ 55 to < 60	C	7
≥ 50 to < 55	D	6
≥ 40 to < 50	E	5
< 40	F	0
Absent	Ab	-

Semester Grade Point Average (SGPA)

Credit Points for the paper = No. of Credits assigned for the paper x Grade Point secured for that course/Paper

SGPA indicates the performance of a student in a given Semester. SGPA is based on the total credit points earned by the student in all the courses and the total number of credits assigned to the courses/papers in a Semester.

$$SGPA = \frac{\sum(\text{LetterGradePoints}) \times (\text{Credits})}{\sum(\text{Credits})}$$

$$CGPA = \frac{\sum(SGPA) \times (\text{Credits})}{\sum(\text{TotalCredits})}$$

Note: SGPA is computed only if the candidate passes in all the papers (gets a minimum 'E' grade in all the Papers)

The following examples illustrate the calculation of Grade Points, Credit Points and Semester Grade Point Average (SGPA) and Cumulative Grade Point Average (CGPA). The percentage of marks shown in column III is the marks secured by the student in the Internal Assessment and Semester End Examination put together.

Manoj
PRINCIPAL
Siva Sivani Degree College
Kompally, Medchal-Malkajgiri(Dt)-500100

Example: BSc/B.com/BA - Semester – I

Course/paper	Credits	% of Marks	Grade Letter	Grade Point	Credit Points = Credits x Grade Points)
Paper-I (Theory)	4	60	B	8	4 x 8 = 32
Paper-II (Theory)	4	50	D	6	4 x 6 = 24
Paper-III (Theory)	4	70	A	9	4 x 9 = 36
Paper-IV (Theory)	4	75	A	9	4 x 9 = 36
Paper-V (Practicals)*	4	75	A	9	4 x 9 = 36
Paper-VI (Practicals)*	4	80	A	9	4 x 9 = 36
Total	24				200

Note: * : The number of practical papers and the credits assigned may vary from one Course to other.

Total Credit Points obtained for all the papers in the Semester-I = 200
Total Credits assigned to all the papers in the Semester-I = 24

SGPA = $\frac{\text{Total Credit Points in the Semester-I}}{\text{Total Credits in the Semester-I}} = \frac{200}{24} = 8.33$

Total Credits in the Semester-I

SGPA for Semester-I = 8.33

Similarly , semester II, III, IV, V and VI should be calculated as per the above procedure.

Cumulative Grade Point Average (CGPA)

CGPA refers to the Cumulative Grade Point Average weighted across all the semesters (6 Semesters) . CGPA is obtained by dividing the total number of credit points (CPTs) in all the semesters by the total number of credits in all the Semesters. The final result at the end of all the semesters is declared in the form of CGPA.

Note: CGPA is calculated only when the candidate passes in all the papers of all the semesters.

Example: BSc/B.Com/B.A

I Semester: Total CPTs = 200 Total Credits = 24

Mamata⁵
PRINCIPAL
Siva Sivani Degree College
Kompally, Medchal-Malkajgiri(Dt)-500100

II Semester:	Total CPTs	=	212	Total Credits =	24
III Semester:	Total CPTs	=	213	Total Credits =	25
IV Semester:	Total CPTs	=	218	Total Credits =	26
V Semester :	Total CPTs	=	216	Total Credits =	24
VI Semester :	Total CPTs	=	210	Total Credits =	22

$$\text{CGPA} = \frac{\sum \text{Total CPTs of Semester I, II, III, IV, V, VI}}{\sum \text{Total Credits of Semester I, II, III, IV, V, VI}}$$

In the present example.

$$\text{CGPA} = \frac{200+212+213+218+216+210}{24+24+25+26+24+22} = 1269/145 = 8.75$$

- Q. Explain law of Diminishing Marginal Utility?
- A. Definition of the law:-
According to Alfred Marshall, the law of diminishing marginal utility is defined as "the additional benefit which a person derives from a given increase of his stock of thing and diminishes with every increase in the stock that he already has".
- * Meaning:-
The Marginal Utility of a commodity diminishes as the consumer gets larger quantities of it. Marginal Utility is the change in the total utility resulting from one unit change in the consumption of a commodity per unit of time.
- * Assumptions:-
The utility is measurable and a person can express the utility derived from a commodity in qualitative terms such as 2, 4, 7 units.
- A rational consumer aims at the maximization of his utility. It is necessary that a standard unit of measurement is constant.
 - A commodity is being taken continuously. Any gap between the consumption of a commodity should be suitable.
 - It is assumed that various units of commodity homogeneous in characteristics.
 - The taste of the consumer remains same during the consumption of the successive units of commodity.
 - It is assumed that the commodity is divisible.
 - Income of the consumer remains constant during the operation of law of diminishing marginal utility.
 - There should be no change in fashion. For example, if there is a fashion of lifted shirts, then the consumer may have no utility in open shirts.
 - It is assumed that the prices of the substitutes do not change. For example, the demand for CNG increases due to rise in the prices of petroleum and these price changes affect the utility of CNG.

* Explain with Schedule and diagram

Units of Com.	Marginal Utility	Total Utility
1	10	10
2	8	18
3	6	24
4	4	28
5	2	30
6	0	30
7	-2	28

* Exceptions or Limitations:-

The limitations or exceptions of the law of diminishing Marginal Utility as follows.

- The law does not hold well in the rare collections. For Example, Collection of ancient Coins, Stamps etc.
- The law is not fully applicable to money. The marginal Utility of money declines with richness but never falls to zero.
- The law is not applicable for precious goods.
- Historical things are also included in exceptions to the law.
- Law does not operate if consumer behaves in irrational manner. For example, drunkard is said to enjoy each successive peg more than previous one.
- Man is fond of beauty and decoration. He gets more satisfaction by getting the above merits of the commodities.
- If a dress comes in fashion, its utility goes up. On the other hand its utility goes down if it goes out of fashion.
- The utility increases due to demonstration. It is a natural element.

4. Explain the types of Price Elasticity of Demand?

A. Price Elasticity of demand:-

The price elasticity of demand is the response of the quantity demanded to change in the price of a commodity.

$$E_{dp} = \frac{\text{Proportionate change in Qty Supplied/demanded}}{\text{Proportionate change in the price of Commodity}}$$

$$E_{dp} = \left[\frac{\Delta Q_d}{\Delta P} \times \frac{P}{Q} \right]$$

ΔQ_d = change in the supply/demand

ΔP = change in price of commodity

P = Initial price

Q_d = Initial Quantity Supplied

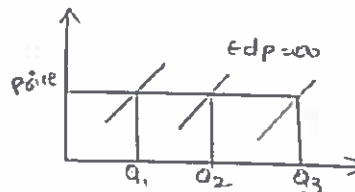

* Types of price Elasticity of Demand.

- perfectly elasticity of demand ($E_{dp} = \infty$)
- Perfectly inelasticity of demand ($E_{dp} = 0$)
- Unitary elasticity of demand ($E_{dp} = 1$)
- Relatively Elasticity of demand ($E_{dp} > 1$)
- Relatively inelasticity of demand ($E_{dp} < 1$)

* perfectly Elasticity of Demand:

No change in the price leads to infinite change in Quantity Demanded.

Price	Qty demanded
10	10
0	30

$$E_{dp} = \frac{\Delta Q}{\Delta P} \times \frac{P}{Q}$$

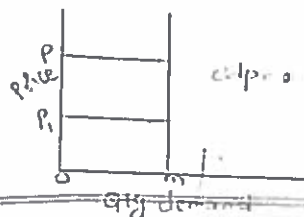

$$= \frac{20}{0} \times \frac{10}{10}$$

$$= \frac{20}{0} = \infty$$

* perfectly inelasticity of demand:-

Though there is change in price but no change in Quantity demanded.

Price	Qty demanded
10	5
5	5

$$E_{dp} = \frac{\Delta Q_d}{\Delta P} \times \frac{P}{Q_d}$$

$$= \frac{0}{5} \times \frac{10}{5}$$

$$= \frac{0}{5} = 0$$

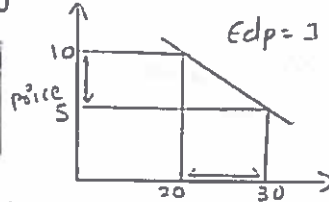

c) Unitary Elasticity of demand:-

Proportionate change in price leads to equal change in quantity demanded

Price	Qty demanded
10	20
5	30

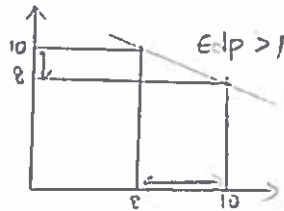

$$Edp = \frac{\Delta Q}{\Delta P} \times \frac{P}{Q}$$

$$= \frac{10}{5} \times \frac{10}{20} = 1$$

d) Relatively Elasticity of demand:-

Proportionate change in the price leads more change in the quantity demanded.

Price	Qty demanded
10	8
8	20

$$Edp = \frac{\Delta Q}{\Delta P} \times \frac{P}{Q}$$

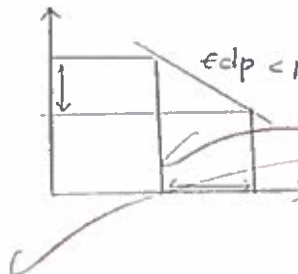

$$= \frac{12}{2} \times \frac{10}{8}$$

$$= \frac{15}{2} = 7.5 > 1$$

e) Relative inelasticity of demand:-

Proportionate change in the price leads less change in the quantity demanded.

Price	Qty demanded
10	8
5	10

$$Edp = \frac{\Delta Q}{\Delta P} \times \frac{P}{Q}$$

$$= \frac{2}{5} \times \frac{10}{8} = \frac{2}{4}$$

$$= 0.5 < 1$$

5. Define supply? Explain law of supply its assumptions, exemptions?

A. Supply Definition:-

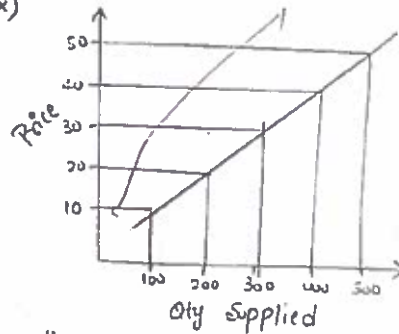

"Supply of a good is the quantity offered for sale in given market at a given time at various prices" - Thomas

* Law of supply:-

Law of supply states that other factors remaining constant, price and quantity supplied of a good are directly related to each other. In other words, when the price paid by buyers for a good rises, then suppliers increase the supply of that good in the market. It states that other things remaining unchanged, the supply of a commodity expands with a rise in price and contracts with a fall in price. The market supply curve is a diagrammatic representation of law of supply

$$S_x = f_n(P_x)$$

Price	Supply of Commodity
10	100
20	200
30	300
40	400
50	500

The above diagram shows the supply curve that is upward sloping. When the price of the good was at P_1 , suppliers were supplying Q_1 quantity. As the price starts rising, the quantity supplied also starts rising.

S. P. Sampathy's Siva Sivani Educational Society (2906/97)

SIVA SIVANI DEGREE COLLEGE

(Affiliated to Osmania University)

Assumptions of Law:

1. Cost of production is unchanged
2. No changes in techniques of production
3. Fixed Cost of production
4. Government policies should be unchanged
5. No change in transportation cost
6. No speculation.
7. Prices of other goods to be held up constant

* Exceptions:

1. Supply of labor:-

If we take supply of labour at a very high wages due to non-availability of labour, supply decreases. Hence supply of labour with high wages is inversely related.

2. Agricultural Products:-

Since, the agricultural products produced cannot be increased beyond even with increased prices, there is a limit in its supply. So supply related to agricultural products has inverse relationship and it is considered as exception to the law of supply.

3. Artistic Goods:- Supply of artistic goods cannot be increased even when the prices are high. Hence, this is an exception to the law of supply.

* Conclusion:-

With the above assumptions and exceptions, price is not the only factor that affects the decisions of supply. The other factors such as exceptions and assumptions are also likely to effect and impact supply decisions.
