## 3.1. Resource Mobilization for Research

### 3.1.1

Research funding from government and non-government agencies is crucial for various reasons.

#### **External & Government Funding:**

**Public Interest:** Governments allocate funds to research that aligns with public interests, such as healthcare, environment, and technology.

**Long-Term Goals:** Governments can support long-term projects with societal benefits that might not attract immediate commercial interest.

**National Competitiveness:** Investing in research enhances a nation's competitiveness by fostering innovation and technological advancements.

#### **Non-Government Agencies:**

**Diverse Perspectives:** Non-government agencies may support research aligned with specific causes or perspectives that might not be prioritized by the government.

**Innovation Acceleration:** Private foundations and industry partners can catalyze innovation by providing resources for cutting-edge research.

**Flexibility and Agility:** Non-government funding sources often have more flexibility to support unconventional or high-risk projects that might not fit government criteria.

In summary, government funding ensures broad societal benefits and long-term goals, while non-government agencies contribute to innovation, diverse perspectives, and the agility needed for certain types of research.

As of now, SSDC relies solely on internal financial support, lacking external grants. In 2023, the IQAC committee initiated efforts to enhance external grant opportunities for eligible faculty. The IQAC research advisory team is actively providing recommendations to encourage faculty members across diverse areas to submit precise and well-organized papers. The focus is on fostering research studies, including multicentric studies, randomized controlled trials, experimental, and observational studies with substantial sample sizes, aiming to attract external grants for the institution.
